

DPF Cleaning

Materials Handling & Non-Road Mobile Machinery

Blocked DPF?

Contact us today and we'll arrange for it to be collected from you...

All Diesel Particulate Filters (DPF's) require regular maintenance and periodic cleaning

Under some duty cycles a DPF may become blocked with soot and activate the emissions warning light. If a forced regeneration does not clear this then the DPF will require cleaning.

Over time, the DPF will also accumulate ash and depending on the duty cycle and warranty requirements will usually require cleaning at least annually.

Excalibre's professional service helps maximise the life of the filter and reduces your operating costs

- Comprehensive pneumatic and thermal cleaning process
- All DPF's are flow tested before and after cleaning to ensure they are returned to a baseline condition
- Full inspection and test report supplied with each DPF clean

The latest OE approved DPF cleaning machines now in operation

Nationwide, daily collection, with fast turnaround
